the sender: [SHIFT]7--[ENTER] --
Enter the SMS message: 81e310abfb

The software is a custom application that handles a database used to store the phone's addresses. The database is pre-filled with existing phone addresses and contacts. Additionally, the addressbook includes a text message (SMS) module allowing the user to send SMS messages using a computer's keyboard, just as he would to another phone. The user is in full control of how and what will be stored in the phone's addressbook, and can customize it to his needs. For example, the program can be used as a telephony software, or you can send and receive SMS messages using a computer instead of a telephone. If you

want a lot of features, you can choose the "Basic" version, or you can opt to pay for an enhanced version. The Basic version is free, while the Enhanced is \$19.95. System requirements: - Windows 95/NT/2000/XP - USB port (the phone must be connected to a USB port when you run the program) - MotoW375 HAV ISDN USB (T30) capable phone

To install it:

1. Connect the USB cable from your phone to the computer
2. Run the downloaded file, and follow the instructions on the screen.
3. You'll see a menu with five options, choose the "Update" option.
4. A progress bar will indicate how the software update is running.
5. The software update is now complete.
- 6.

Disconnect the USB cable, open Motorola Manager, and then go to the "Service Status" menu, and then to the "Service Status" menu. After updating the software, you'll have to re-start the phone in order to get the updates working. Trial and registered versions are available.
